Available immediately | Open to relocation across mainland France

Graduate in Data and AI (Master's level), with one year at the French tax administration (DGFiP), as a data analyst intern then data engineering apprentice, in the unit that mines tax data to select the cases worth auditing: demanding SQL, process automation, reporting to inspectors. Trained in big data and data science (machine learning, MLOps), I build tested, monitored pipelines on my projects and can explain their output to non-technical teams.

EXPERIENCE

DGFiP, DIRCOFI Île-de-France . . . . . Saint-Denis, France
Research and Programming Brigade (20 staff): the unit that mines tax data to select the cases worth auditing, working daily alongside non-technical tax inspectors.

Data Engineer, apprenticeship *Sep 2025 to Sep 2026*

- Exploited and cleaned confidential tax data in advanced SQL (PostgreSQL) for case selection
- Rewrote complex existing queries, cutting execution time by **30 to 40%**
- Automated, on my own initiative, processes previously done by hand; the unit then adopted them
- Documented and shared data best practices within the team

Data Analyst, internship *Jun 2025 to Aug 2025*

- SQL support for tax inspectors: turning their business questions into queries on sensitive databases
- Territorial study of audit coverage, delivered as dashboards and maps (QGIS)

Technologies: SQL, PostgreSQL, QGIS, Excel, VBA

PROJECTS

GameLens Real-time and batch data platform
github.com/Mael8zinsou/gamelens-bloc4_0
Certification case study: a video game publisher's platform unifying catalogue, player counts, Twitch viewership and prices, to steer marketing and pricing.

- Steam and Twitch APIs ingested through Kafka into PostgreSQL, then a Snowflake Gold layer computed with Snowpark; exactly-once delivery proven by offset replay
- **29 data contracts**, each proven to fail on a deliberately corrupted dataset; 6-stage CI/CD, Grafana monitoring as code (6 alert rules)

Technologies: Python, Kafka, Airflow 3, dbt, Snowflake, Snowpark, PostgreSQL, Docker, GitHub Actions, Grafana

Mail Track AI LLM-based email classification
github.com/Mael8zinsou/Mail_track_AI
Automatic triage of replies to my job applications, for my own job search.

- Daily LLM classification (Gemini) of Gmail messages into 6 categories, with a summary, feeding a Google Sheets dashboard
- **15 emails per request** to fit the free quota (20 requests a day); no email processed twice

Technologies: Python, Gmail API (OAuth2), Gemini API, Google Sheets API, GitHub Actions

TMDB Distributed ELT pipeline
github.com/Mael8zinsou/tmdb-data-pipeline
Analytics-ready movie catalogue built from TMDB data.

- PySpark to Snowflake through S3-compatible storage: 12 dbt models, 51 tests, 8-task Airflow DAG, 7-service stack in one command

Technologies: PySpark, MinIO (S3), Snowflake, dbt, Airflow, Docker

InfoTrafic Traffic prediction and MLOps (team project)
github.com/Mael8zinsou/Info_Trafic
Paris traffic state (free-flowing to blocked) predicted from the City's open-data sensors.

- 4-class classification (scikit-learn): baseline at **0.99 accuracy**, second model at 0.97 but reliable when a sensor fails
- Blue-green deployment, shadow testing, Prometheus and Grafana monitoring, retraining in CI

Technologies: Python, scikit-learn, FastAPI, Docker, Prometheus, Grafana

EDUCATION

Master's degree in Data and AI, Data Engineering track
Paris YNOV Campus . . . . . *2025 to 2026* Nanterre, France
RNCP level 7 (5-year degree), as an apprentice at the DGFiP.

- Distributed data architectures, industrialisation and MLOps, data project management
- Certification project: GameLens, designed from architecture to operations

Engineering programme, Big Data track
JUNIA ISEN . . . . . *2023 to 2025* Lille, France

- Python and R, distributed computing, machine learning (scikit-learn)
- DevOps practices (Docker, continuous integration), agile methods

Preparatory classes (MPSI)
Cycle Préparatoire Sainte Marie-Stella . . . . . *2021 to 2023* Cotonou, Benin
Mathematics and physics.

SKILLS

Languages: SQL (advanced), Python, Bash, R, C, C++

Data engineering: ETL and ELT, Kafka, Airflow 3, dbt, PySpark, Snowflake and Snowpark, PostgreSQL, Talend, MinIO and S3

Data quality: data contracts, negative testing, pytest

Production: Docker, GitHub Actions, Git, Kubernetes (Helm, kind)

Monitoring: Prometheus, Grafana as code, alerting, incident procedures

ML and AI: scikit-learn, FastAPI, MLflow, AI-assisted development (Claude Code), LLM APIs

BI and GIS: Power BI, QGIS

LANGUAGES

French . . . . . Native
English . . . . . Professional (TOEIC B2)

INVOLVEMENT

Coordinated 12 conferences, 4 of them technical (JUNIA Alumni, 2024 to 2025).

Tutored secondary school students (JUNIA ISEN, 2024 to 2025).
